

Analytical Rubric for Main and Mini Projects						
		(90 - 100%)	(80 - 89.9%)	(70 - 79.9%)	(60 - 69.9%)	(59.9% and lower)
Conceptual Development	Creativity / Originality	The project demonstrates a significant amount of creativity and originality, offering a unique view on this topic.	The project demonstrates a sufficient level of creativity and originality, offering a good view on this topic.	The work demonstrates a hint of creativity and originality, offering some understanding on this topic.	The work demonstrates minimal creativity and originality, offering an uninteresting view on this topic.	The work does not demonstrate any creativity or originality. There is no evidence of experimentation and trial of ideas and concepts.
	Exploration	Final result is distinct from other projects. There is high evidence of experimentation and trial of ideas and concepts.	Final result is merely distinct from other projects. There is good evidence of experimentation and trial of ideas and concepts.	Final result is merely similar to other projects. There is a hint of experimentation and trial of ideas and concepts.	Final result is similar to other projects. There is a low evidence of experimentation and trial of ideas and concepts.	Final result is indistinct and vague . There is no evidence of experimentation and trial of ideas and concepts.
	Execution of Concept	Student used concepts and techniques that largely extended beyond those provided during class, demonstrating new developed material of excellent quality.	Student used concepts and techniques provided during class, but extended them, demonstrating new developed material of good quality.	Student used concepts and techniques provided during class, but slightly extended them, demonstrating new developed material of adequate quality.	Student mostly used concepts and techniques provided during class, demonstrating new developed material of low quality.	Student has repeated only classroom content, without demonstrating any new developed material.
Technical Development	Technical Understanding / Complexity	Student has taken most of the programming concepts and techniques taught in class and applied them in a way that is entirely their own . Complexity of programming concepts attempted are clearly above and beyond expectations set in the brief.	Student has taken a few of the programming concepts and techniques taught in class and used sample codes as a starting point . Student has successfully developed the project from the reference in their own creative way.	Student has used sample codes from the Internet and could not freely/successfully utilize them. Student has improved them in their own way , and there is little evidence of understanding, application and/or analysis.	Student has not made a sufficient attempt to meet the technical requirements of the assignment.	Student has not made any attempt to meet the technical requirements of the assignment.
		The code complexity/sophistication is high , demonstrating an exceptional functional level and creatively making the most with only the techniques learned in class , demonstrating truly creative coding approaches.	The code complexity/sophistication is solid , demonstrating a successful functional level using only the techniques learned in class , demonstrating some creative coding approaches.	The code complexity is basic , demonstrating a merely functional level and using techniques not covered in class to achieve the desired result.	The code complexity is low , demonstrating a limited functional level and mostly using techniques not covered in class to solve the problems , as the student demonstrates minimal understanding of the techniques covered in the class.	The code complexity is extremely low , demonstrating a non-functional level or it is not following the prompt at all.
	Performance / Execution of the Code	The execution of the project is excellent ; the programming sketch runs perfectly with no errors ; displays visuals without framerate drop ; and/or student work presents a sufficient amount of attempts to optimize the operation and framerate.	The execution of the project is smooth ; the programming sketch runs stable but with minor errors and/or framerate drop ; Student work presents an adequate amount of attempts to optimize the operation and framerate.	The execution of the project is acceptable ; the programming sketch runs unstable and crashes occasionally with noticeable errors . Student work presents a poor amount of attempts to optimize the operation and framerate.	The execution of the project is unacceptable ; the programming sketch crashes too frequently with major errors; Student work presents no attempts to optimize the operation and framerate.	The project is not executable .
	Clarity of Code / Comments in the Code	Code is perfectly organized , having a clear structure with attention to detail. Code has excellent commenting , providing evidence that demonstrates full knowledge .	Code is well organized , having a good structure. Code has good commenting , providing evidence that demonstrates sufficient knowledge .	Code is merely organized , having a structure that is somewhat clear . Code has some commenting , providing evidence that demonstrates basic knowledge .	Code is poorly organized , having a structure that is not very clear . Code has fewer commenting , providing evidence that demonstrates unclear knowledge .	Code is not organized at all , having an unclear and confusing structure. Code does not have any commenting , providing no evidence of knowledge .
Design & Production	Composition	Makes excellent use of programming techniques, graphics, sound-effects , and/or user interaction to enhance the visual aesthetic and/or user experience. Every element is polished professionally.	Makes good use of programming techniques, graphics, sound-effects , and/or user interaction to enhance the visual aesthetic and/or user experience. Most elements are polished professionally.	Makes limited use of programming techniques, graphics, sound-effects , and/or user interaction to enhance the visual aesthetic and/or user experience. Elements are not thoughtfully organized.	Makes poor use of programming techniques, graphics, sound-effects , and/or user interaction to enhance the visual aesthetic and/or user experience. Elements are somewhat unorganized .	Does not make use of programming techniques, graphics, sound-effects , and/or user interaction to enhance the visual aesthetic and/or user experience. Elements are completely unorganized .
	Coherence	Craftsmanship is outstanding , ideas are communicated clearly in all design forms. All key concepts is clearly illustrated in work.	Craftsmanship is very good , ideas are communicated well in all design forms. Most key concepts is clearly illustrated in work.	Craftsmanship is fair , ideas are communicated unclear in all design forms. Basic key concepts is illustrated in work.	Craftsmanship is poor , ideas are communicated incoherently in all design forms. A few key concepts is illustrated in work.	Craftsmanship is not demonstrated, ideas are not communicated in all design forms. Key concepts is not evident in work.
	Interaction	All interaction methods are highly intuitive. Users are able to explore the entire project on their own. User experience is perfectly generated as intended.	Most interaction methods are intuitive. Users are able to explore most parts of the project on their own, but additional instructions are often needed. User experience is well-generated as intended.	Interaction methods are somewhat intuitive. Users are able to explore some parts of the project but additional instructions are frequently required. User experience is poorly generated as intended.	Interaction methods are not intuitive. It is difficult for users to explore the project on their own. Additional instructions are constantly required. User experience is not generated as intended.	Users are unable to explore the project. User experience is not generated.
	Problem Solving / Risk Taking	Consistently high-quality work is generated, with an unconventional approach to production and problem-solving. Original strategies utilized to reach the final result.	Good-quality work is generated, with a conventional approach to production and problem-solving. Solid strategies utilized to reach the final result.	Basic-quality work is generated, with a disorganized approach to production and problem-solving. Basic strategies utilized to reach the final result.	Minimal-quality work is generated, with an unclear approach to production and problem-solving. Incomplete strategies utilized to reach the final result.	Low-quality work is generated, with no approach to production and problem-solving. No strategies utilized to reach the final result.
Presentation, Documentation & Reflection	Presentation	Outstanding presentation of work, engaging, compelling, and clear project overview. Student shows excellent communication/storytelling skills . Clear explanation of project motivation, current implementation and next steps. Overall the presentation enhances the project, revealing profound enthusiasm and a deep interest in the subject.	Student demonstrates good communication/storytelling skills . The presentation shows that the student spent a good amount of time preparing. There might be few things the student forgot to mention, but it is good overall and fulfilling all the requirements. As a whole, the presentation reveals enthusiasm and interest in the subject	Student show acceptable communication/storytelling skills to present their work in front of an audience. The presentation reveals adequate signs of organization or preparation time to deliver what it was required. Overall, the presentation displays an adequate degree of interest in the subject.	Presentation is somewhat engaging but it could have done much better. Weak demonstration of communication/storytelling skills. It might not include relevant information or student is mostly reading from the slides . There is limited engagement and interest from the student.	Student certainly did not spend enough time preparing to present. The presentation is missing key parts or very unclear. The student's lack of interest and engagement is evident.
	Conceptual Development	Ideas are thoroughly evaluated and documented, exemplary informing development and refinement stages.	Ideas are sufficiently evaluated and documented, clearly informing development and refinement stages.	Ideas are fairly evaluated and documented, adequately informing development and refinement stages.	Ideas are marginally evaluated and documented, inadequately informing development and refinement stages.	Ideas are not evaluated and documented; development and refinement stages are not informed .

		Technical Development	Documentation displays outstanding evidence of the development process, showing high values of professionalism.	Documentation displays convincing evidence of the development process, showing good values of professionalism.	Documentation displays appropriate evidence of the development process, showing some values of professionalism.	Documentation displays inadequate evidence of the development process, with lack of values of professionalism.	Documentation displays no evidence of the development process.
		Reflections	Documentation contains an excellent amount of reflections to feedback received from peer students, instructor and guest critics, and constructive adjustments to the project based on the feedback and references from readings or previous research projects.	Documentation contains a good amount of reflections to feedback received from peer students, instructor and guest critics, and fair adjustments to the project based on the feedback or some references from readings or previous research projects.	Documentation contains a limited amount of reflections to feedback received from peer students, instructor and guest critics, and inadequate adjustments to the project based on the feedback, references from readings or previous research projects.	Documentation contains an extremely limited amount of reflection to feedback received from peer students, instructor and guest critics, and does not include any adjustments to the project.	Documentation does not contain any reflection to feedback received or from references from the readings or previous research projects.
	Engagement	Engagement & Motivation	Student demonstrates spending significant time and effort on the projects/tasks. Professional development is always exhibited.	Student demonstrates spending a good time and effort on the projects/tasks. Professional development is often exhibited.	Student demonstrates spending an adequate time and effort on the projects/tasks. Professional development is occasionally exhibited.	Student demonstrates spending a limited time and effort on the projects/tasks. Professional development is rarely exhibited.	Student demonstrates spending no time and effort on the projects/tasks. Professional development is never exhibited.
		Sharing Feedback	Student successfully solicits and provides feedback from peers and instructors, and enthusiastically applies the feedback to their project.	Student often solicits and provides feedback from peers and instructors, and actively applies the feedback to their project.	Student occasionally solicits and provides feedback from peers and instructors, and sometimes applies the feedback to their project.	Student rarely solicits and provides feedback from peers and instructors, and barely applies the feedback to their project.	Student never solicits and provides feedback from peers and instructors.
		Punctuality	Both project and documentation are completed on time.	Project is completed on time. Documentation is submitted within three days after the deadline.	Project is completed on time. Documentation is submitted later than three days after the deadline.	Both project and documentation are submitted late.	Both project and documentation are not submitted.
		Fulfilled Requirements	All requirements are met , following precisely the instructions given.	Most requirements are completed, following the instructions given.	Some requirements are completed, following most of the instructions given.	A few requirements are completed, not clearly following the instructions given.	Requirements are not completed on time, and the instructions given are not followed.
	Attribution	-	Student evidently attributes the source of the references, example codes and inspirations.	(Not applicable)	(Not applicable)	(Not applicable)	Attributions are not listed. The project may be reported as plagiarism.

Analytical Rubric for Classroom Engagement

	Classroom Engagement		OUTSTANDING	ACCEPTABLE	WEAK		
		Attendance & Punctuality	Student was present for every class or missed once with notifying the instructor within a reasonable amount of time (not after the fact). Student was always on time for class and often arrived early.	Student was absent for 1 to 3 classes but provided instructor with a reasonable excuse before the class. Missed one or two classes without a justification, or contacted the instructor after the class. Student was usually on time or early for class (arrived late to class only 1 to 4 times).	Student was absent for more than 3 classes and/or did not provide instructor with a proper notification. Student was rarely on time or early (arrived late 5 or more times).		
		Classroom Interaction	Frequently initiates contributions and offers to respond to questions posed in class; regularly raises questions. Comments are always insightful and constructive; uses appropriate terminology; asks insightful questions that demonstrate that the student has read the texts required for that class, and he/she has actively listened during class.	Occasionally initiates contributions and offers to respond to questions posed in class; occasionally raises questions. Comments are mostly insightful; uses adequate terminology; asks questions that demonstrate a good understanding of the material presented during the class.	Does not seek to proactively contribute to the class and will only respond to direct questions posed by the instructor; does not raise questions. Comments are uninformative; does not use appropriate terminology; the comments rely on feelings and personal preferences instead of an analysis of the project/question asked ("I don't like the idea", "sounds great").		
		Engagement	Actively listens during classes / presentations, including when other students speak; builds on comments of others. Contributes positively inside and outside the classroom. Supports their peers with technical help, advice, or feedback. Actively participates of workshops or IMA activities.	Mostly pays attention when others present or pose questions; occasionally needs to be reminded by the instructor to focus or comment. A student who tries hard, participates of some workshops or IMA activities, and sometimes provides support to their peers.	Does not listen to others; speaks while others speak; does not engage in meaningful discussions. Does not seek to connect with others or other topics outside of the classroom. Does not contribute to the community or/and does not participate in any of the suggested workshops or IMA activities.		
	The A student goes above and beyond the expectations and requirements described in this syllabus. This will be measured in a number of ways including the level of participation during the class sessions as well as outside. The A student completes assignments on time, initiates conversations, helps others in need, and asks questions when they run into problems or don't understand a concept.						
	Classes begin promptly at the scheduled start time. Please arrive early so as not to be late. This class will be highly participatory with lectures being very conversational. You are invited and expected to contribute to in-class discussions.						
	Evaluation will consider: Attendance, punctuality, discussion, preparation, familiarity with the readings, dedication, and contribution to the team. In addition to working steadily throughout class studio time, students must work outside of class, and this must be demonstrated in the work.						
	Socializing on topics not related to class during class time, lack of energy, and slow progress will result in a lower grade in this area. Attending class while unprepared, working on assignments for other courses, and using your cell phone or computer for purposes unrelated to the class will result in a reduction of your participation grade.
